The image features seven diamond ring settings arranged on a dark, vertically-grained wooden surface. The settings are shown from a top-down perspective. Each setting consists of a round brilliant-cut diamond held in place by four prongs. The prongs are attached to a circular bezel that has a decorative, scalloped or 'petal' edge. From this bezel, two thin, tapered shanks extend outwards. The diamonds are clear and show significant light reflection. The metal of the settings appears to be a light color, possibly white gold or platinum. The text 'FRENCH SETTINGS WITH SHANK' is centered horizontally across the middle of the image in a white, all-caps, sans-serif font.

hotfix motif

Beyond supplying the loose hot fix stones, we also produce iron on patterns made by the hot fix rhinestone. Lian have developed its own automatic motif making machine which could allow us to make patterns with maximum 18 combinations of stones in the same time. It allows us to produce patterns that are much more complicated and comparatively larger size than regularly found in the market.

We have open designs on patterns for customers to select from and also produce custom patterns. Please kindly contact our sales department for further details and / or free quotation service for custom patterns.
